

SEO Audit Report

Site: https://nrbridgeindia.com/ · **Date:** 2026-05-19 · **Business type:** Hybrid Service-Area Business + SaaS · **Operating cities:** Chennai, Coimbatore, Kanyakumari

44 / 100

SEO Health Score · weighted composite of 7 categories

Verdict: Poor — significant work required before this site can compete in organic search.

Score Breakdown by Category

Category	Weight	Score	Weighted	Status
Technical SEO	22%	55 / 100	12.1	Mixed
Content Quality (E-E-A-T)	23%	35 / 100	8.0	Poor
On-Page SEO	20%	50 / 100	10.0	Mixed
Schema / Structured Data	10%	45 / 100	4.5	Weak
Performance (CWV)	10%	50 / 100	5.0	Mixed
AI Search Readiness (GEO)	10%	41 / 100	4.1	Weak
Images	5%	25 / 100	1.3	Poor

Cross-cutting sub-score

Local SEO: 18 / 100 — the single weakest area. This is a local service business with no published NAP, no Google Business Profile signals, and no city landing pages. Local fixes are the highest-leverage area on the entire site.

Critical Issues — Fix Immediately

CRITICAL 1 Zero NAP data anywhere on the site

No phone, address, or email is present in the footer, contact page, or schema. The footer states only "Registered in India" with no CIN, GST number, or legal name. For a local service business handling YMYL categories (elder care + legal/financial), this is fatal — it blocks GBP verification, citations, trust signals, and schema validity.

Fix: Publish phone + registered office address in the footer, the contact page, and the `ProfessionalService` schema today. Even a service-area business benefits from a disclosed city of registration.

CRITICAL 2 Placeholder WhatsApp number on quote-builder.html

Line 466 of `quote-builder.html` contains `https://wa.me/91XXXXXXXXXX` — a literal placeholder. Any user who taps "WhatsApp Us" gets a broken link. On a YMYL service site, a broken contact path is a hard trust failure.

Fix: Replace `91XXXXXXXXXX` with the real business WhatsApp number before any further marketing activity.

CRITICAL 3 Unverifiable testimonials and unsourced statistics

Six 5-star testimonials use generic Name / Job / City with initials-only avatars and no platform links. Homepage statistics (62%, 78%, 53%, "₹3.2 L average loss", "4 in 10 vehicles") have no source citations. Under the September 2025 Google Quality Rater Guidelines, specific-looking numbers without traceable sources read as fabricated authority, particularly on YMYL pages.

Fix: Link each testimonial to a public review source (GBP, Trustpilot). Source every statistic to a named report (ANAROCK NRI survey, RBI, etc.) — or rewrite them as softer experiential claims ("NRIs we work with consistently report...").

CRITICAL 4 No author / founder / expert attribution on YMYL pages

The Emergency Response and legal service pages promise 5-minute ambulance dispatch, Power of Attorney execution, tax filing, and court monitoring with no named professional behind any of it. The footer "About Us" link is `href="#"` and no `about.html` exists in the repository. The September 2025 QRG explicitly requires YMYL content to demonstrate who is accountable.

Fix: Build `about.html` with named founders, photos, and credentials. Add a visible "Service led by [Name], licensed advocate/CA/doctor, registration number] block on each YMYL service page.

CRITICAL 5 **signup.html and quote-builder.html are indexable**

Both appear in `sitemap.xml` (lines 36–37) and neither carries a `noindex,nofollow` meta tag. Google will index a bare signup wall and a placeholder-laden quote form — neither has organic search value.

Fix: Add `<meta name="robots" content="noindex,nofollow">` to both pages, add `Disallow:` entries in `robots.txt`, and remove both URLs from `sitemap.xml`.

CRITICAL 6 **POA page is structurally unrankable for its target query**

The page is ~425 words. The dominant SERP format for "power of attorney NRI India" is informational guides of 1,500–3,000 words with step-by-step process, country-specific (UK/USA/UAE) apostille-vs-notarisation guidance, and FAQ schema. The current page leads with pricing on an information-dominant query — a structural mismatch Google will not feature.

Fix: Expand to 1,500+ words. Lead with process content. Move pricing below the fold. Add `FAQPage` schema with at least 6 questions.

High-Priority Issues

HIGH 7 **Render-blocking Google Fonts on every page**

Line 21 of every page is a synchronous `<link rel="stylesheet">` to Google Fonts. This blocks the first paint until the browser fetches the font CSS from `fonts.googleapis.com`. Estimated impact: **+300–800ms LCP penalty** for users in Asia, Middle East, and the Americas.

Fix: Replace with the `preload` + `media="print"` `onload="this.media='all'"` non-blocking pattern across all 45 pages. Highest-ROI performance change available.

HIGH 8 **LCP element is an unoptimized PNG with no dimensions**

The hero logo `NRI-BRIDGE-INDIA_LOGO-WHITE-PNG.png` is the LCP candidate on every page. It is PNG (no WebP/AVIF), has no `width / height` attributes, no `fetchpriority="high"`, and no `<link rel="preload">`. The JS-injected nav loads the same image at 80px with no dimensions, causing CLS.

Fix: Convert to WebP (50–70% size reduction). Add explicit `width / height`, `fetchpriority="high"`, and a `preload` hint in `<head>`. Set dimensions on the nav logo inside `nav.js`.

HIGH 9 **Schema is under-specified across the site**

The homepage `ProfessionalService` node lacks `telephone`, `address`, `geo`, city-level `areaServed`, `aggregateRating`, and `sameAs`. No `BreadcrumbList` JSON-LD on any service page despite visible HTML breadcrumbs. `contact.html` and `quote-builder.html` have no schema at all.

Fix: Deploy enriched `LocalBusiness / ProfessionalService` schema with three city-level `areaServed` entries (Chennai, Coimbatore, Kanyakumari) and full NAP. Add `BreadcrumbList` JSON-LD on all 26 service pages. Add `AggregateRating` to homepage once real reviews exist.

HIGH 10 Plan-tier naming inconsistency

`service-rent-collection.html` references Bronze / Silver / Platinum tiers; the homepage pricing section uses Starter / Standard / Premium. This is a visible contradiction for any user navigating between pages.

Fix: Standardise tier names sitewide to Starter / Standard / Premium.

HIGH 11 Service pages are thin for YMYL category

`service-rent-collection.html` ~280–300 words. `service-emergency-response.html` ~260 words. Both handle financial and elder-care medical topics respectively. The rent collection page does not cover NRO/NRE account tax implications, FEMA, or TDS obligations on rental income. The emergency page does not list networked hospitals, caretaker ratios, or response-team qualifications.

Fix: Expand each service page to at least 900 words. Add a "What to expect" narrative, a real scenario walkthrough, and a 5-question FAQ.

HIGH 12 Three Google Business Profiles are missing

The business operates in Chennai, Coimbatore, and Kanyakumari. There are zero GBP signals on the site (no Maps embed, no Place ID, no review widget, no GBP badge). For a 3-city operation, three separate GBP listings are required.

Fix: Create and verify three GBP listings with city-specific primary categories ("Property Management Company" or "Home Health Care Service" as appropriate). Wrong category is the #1 negative local ranking factor.

Medium-Priority Issues

Issue	Evidence	Fix
Sitemap uses deprecated <code><priority></code> + <code><changefreq></code>	All 37 URLs. Google has ignored both since 2023.	Strip both fields. Keep only <code><loc></code> and <code><lastmod></code> .
All sitemap <code>lastmod</code> values identical (2026-05-16)	Google treats uniform <code>lastmod</code> as unreliable and discounts the sitemap's freshness signal.	Replace with real per-file modification timestamps.
No <code>llms.txt</code>	Highest-leverage GEO gap. AI crawlers must infer site identity cold.	Publish <code>/llms.txt</code> with site description, canonical URLs with one-line descriptions, contact URL, license declaration. 30 min effort.

Issue	Evidence	Fix
No city landing pages	Footer "Cities We Cover" is <code>href="#"</code> . No <code>*chennai*</code> / <code>*coimbatore*</code> files exist.	Build three substantive city pages with local team bios, city testimonials, regulatory notes. Do not generate templated thin city pages — that is a doorway-page violation.
Duplicate OG descriptions on inner pages	<code>service-rent-collection.html</code> , <code>quote-builder.html</code> , <code>contact.html</code> all share the homepage OG description.	Write unique 150–160 char OG + meta descriptions per page.
Supabase JS SDK loads on marketing pages	~120KB gzipped, blocks parse on pure marketing pages that need no auth state.	<code>defer</code> the SDK on non-app pages, or conditionally load only on auth pages.
No custom nginx config detected	<code>Dockerfile</code> is bare <code>nginx:alpine</code> . Recent commit messages claim caching but no <code>nginx.conf</code> exists in the repo.	Add nginx config with HSTS, <code>X-Content-Type-Options</code> , <code>Referrer-Policy</code> , and explicit <code>Cache-Control</code> for static assets (1y immutable) + HTML (1h).
Missing <code>AggregateRating</code> schema	Six named testimonials on homepage but no review schema.	If testimonials are genuine, add <code>AggregateRating</code> to <code>ProfessionalService</code> — highest-CTR rich result available for service businesses.
No freshness signals on YMYL pages	No <code>datePublished</code> or <code>dateModified</code> on legal/financial/medical pages.	Add visible "Last updated [Date]" lines + <code>dateModified</code> in schema across all service pages.
No <code>FAQPage</code> schema on any page	Largest missed source of PAA (People Also Ask) box capture.	Add 5-question FAQ + <code>FAQPage</code> JSON-LD on every service page.
SVG <code>feTurbulence</code> filter as <code>position:fixed</code> overlay	<code>shared.css</code> applies this to every page; recomposites on every scroll frame, hurting mobile INP.	Convert to a static PNG/WebP texture or remove.

Low-Priority Issues

- **Homepage H1 has zero keywords.** "We bridge the distance, you feel the difference" is brand copy. Suggested rewrite: *"Complete Property, Vehicle, Parental Care & Legal Management for NRIs — Chennai, Coimbatore & Kanyakumari."*
- **Contact page hero is grammatically broken:** "Our NRI Bridge India support team would get back to you." Rewrite as a complete sentence.
- **Conflicting trust claims:** homepage says "Trusted by 1,000+ NRIs" in the hero and "Trusted by hundreds of NRI property owners" in the value-card section. Reconcile.
- **No currency toggle.** Pricing is ₹-only. Most of the target audience thinks in USD, GBP, or AED — add a secondary display.

- **Hero** `h1` **opacity-0 + animation-delay risks FOUT** with Playfair Display swap. Consider `font-display: optional` for headings or a metric override.
- **robots.txt lacks named AI crawler rules.** Add explicit `Allow` blocks for GPTBot, OAI-SearchBot, ClaudeBot, PerplexityBot, Google-Extended to signal intentional AI search participation.

30-Day Action Plan

Week 1 — Trust & blockers

1. Publish phone + address in footer, contact page, and `ProfessionalService` schema.
2. Replace the WhatsApp placeholder number on `quote-builder.html`.
3. Add `noindex,nofollow` to `signup.html` + `quote-builder.html`; remove both from sitemap.
4. Build `about.html` with named founders + photos. Wire footer link.
5. Source or rewrite every unattributed homepage statistic.

Week 2 — Performance & schema

6. Deploy the non-blocking Google Fonts pattern across all 45 pages.
7. Convert logo to WebP; add `width / height`, `fetchpriority="high"`, and preload hint in head.
8. `defer` the Supabase SDK on marketing pages.
9. Deploy enriched LocalBusiness schema (city-level `areaServed`, telephone, address, geo) on the homepage.
10. Add `BreadcrumbList` JSON-LD on every service page (26 pages).
11. Add nginx config with security headers and explicit caching directives.

Week 3 — Content depth (top 5 pages first)

12. Expand to 900+ words with 5-question FAQ + `FAQPage` schema on: POA, rent-collection, emergency-response, doctor-appointment, companion-caretaker.
13. Standardise plan-tier naming sitewide to Starter / Standard / Premium.
14. Add expert attribution + `dateModified` on every YMYL page.
15. Rewrite first 60 words of each H2 section as a self-contained, entity-rich answer passage (improves AI citation).

Week 4 — Local + GEO foundations

16. Create and verify three Google Business Profiles (Chennai, Coimbatore, Kanyakumari).
17. Build three differentiated city landing pages — local team bios, city testimonials, regulatory notes.
18. Publish `/llms.txt`.
19. Strip deprecated tags from sitemap; replace identical `lastmod` values with real per-file dates.
20. Build citations on Justdial, Sulekha, IndiaMART; link via `sameAs` in `Organization` schema.

What's Already Good

- **robots.txt** correctly disallows all private application pages and references the sitemap.
- All private portals (admin, dashboard, employee, payment, login, etc.) carry `noindex,nofollow` — defence in depth done right.
- Canonical, Open Graph, and Twitter card tags are present on inner pages.
- Homepage schema `@graph` structure is well-formed (just under-specified).
- HTTPS, viewport meta, `lang="en"` all correctly set.
- Sitemap covers all 26 service pages and 4 category hubs — no missing public content.

Audit Limitations

The following could not be measured without paid tools or manual verification:

- Live CrUX / PageSpeed Insights field data (no Google API credentials configured). Performance findings are derived from static source analysis.
- Live SERP rank tracking and competitor backlink data (no DataForSEO extension installed).
- Actual Google Business Profile existence, citation presence on Justdial / Sulekha / IndiaMART, and review velocity (require manual platform search or BrightLocal / Whitespark).
- Real-world INP and CLS measurements (require RUM data from production traffic).

To unlock these, run `/seo google setup` or install the DataForSEO extension, then re-audit.
